DETAILED ACTION

Prior to setting forth the election of species requirement, the Examiner reminds applicants that under USPTO practices, claims to “use” of a product are considered non-statutory under 35 U.S.C. §101. Applicants are advised to amend the claims accordingly when responding to this requirement.

Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- a) species of patient and antibody: human or mouse
- b) species of condition to be treated, selected from the group consisting of:
 - i. Polyarteritis nodosa
 - ii. Aortitis syndrome
 - iii. Vasculitis associated with immunological abnormalities
 - iv. Vasculitis having resistance to steroids and/or immunosuppressants.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Art Unit: 1647

Human: claims 8, 11, 13, 22, 25, 28, 36, 39, 42

Mouse: claims 9, 12, 14, 23, 26, 29, 37, 40

Polyarteritis nodosa: 3, 17, 31

Aortitis syndrome: 4, 18, 32

Vasculitis associated with immunological abnormalities: 5, 19, 33

Vasculitis having resistance to steroids and/or immunosuppressants: 16.

The following claim(s) are generic: 1, 2, 6, 7, 10, 15, 20, 21, 24, 27, 30, 34, 35, 38, and 41.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: with respect to the species election between humans and mice, the two organisms have obviously different phenotypes, physiologies and metabolisms. As all these must be considered, there is no unifying technical feature.

With respect to the different types of vasculitis, once again, each disease has different causes and etiologies, especially when prevention must be considered, such that the mere commonality of vasculitis cannot be considered a unifying technical feature any more than cancer, which is well known to be a group of diseases.
